What is your research question?

Get answers

[How it works](#)

To gather insights on a topic, you can ask:

What is known about how microRNAs are involved in neural plasticity?

To identify new areas of research, you can ask:

What are the potential applications of nanotechnology in medicine, such as targeted drug delivery, tissue engineering, and diagnostics?

To identify established experimental methods, you can ask:

How can I test the effects of additive manufacturing on the structure, mechanical properties, and crystallinity of polymers?

Science Direct GenAI

- 交互式文献搜索助手
- 基于ScienceDirect and Scopus数据库
- 文献推荐的参考指标为内容相关度和发表年份，不考虑期刊、作者信息及被引量
- 免责声明：Alpha 阶段，请在所属科研机构指导下使用
- 示例题目：图书馆在改善拖延症方面的作用(泛调研阶段)

使用方法1：了解一个关键词

➤ 话术：

- what is known about academic procrastination
- what are the major research issues of academic procrastination
- ...

- 找到正确的academic terms
- 吸取在LR中展开关键词的思路
- 追溯文献
- 浏览关联主题，寻找研究方向

① How it works

what is known about academic procrastination

This is generative AI content and the quality may vary. Consider checking important information.

Summary answer

Academic Procrastination

Definition and Characteristics:

- **Academic procrastination** is the tendency to delay or postpone academic tasks, such as study plans, assignments, or projects, despite knowing that this delay will likely have negative consequences (Aruğaslan, 2024), (Zhang, Paquette & Hu, 2024), (Hidalgo-Fuentes et al., 2024), (Gustavson & Miyake, 2017), (Rad et al., 2023), (Loeffler et al., 2019).
- It is considered a **self-regulation failure** involving cognitive, emotional, and behavioral factors (Aruğaslan, 2024).

Prevalence:

- It is highly prevalent among students, with estimates suggesting that **50-95%** of students engage in procrastination to some degree (Hidalgo-Fuentes et al., 2024). (Gustavson & Miyake, 2017). (Rad et al., 2023). (Loeffler et al., 2019).

使用方法2：追问一个研究方向

➤ 话术：

- what are the environmental factors of academic procrastination
- what are the characteristics of library environment
- how can library environment mitigate academic procrastination
- what is underexplored about academic procrastination（不推荐）
- ...

➤ 追溯文献

- 搜索次要关键词
- 吸取可展开的角度
- 进一步定位具体课题，越具体越需要个人的判断力

what are the environmental factors of academic procrastination

Get answers

How it works

what are the environmental factors of academic procrastination

This is generative AI content and the quality may vary. Consider checking important information.

Summary answer

Environmental Factors of Academic Procrastination

Several environmental factors contribute to academic procrastination, influencing students' tendencies to delay their academic tasks. Key factors include:

- **Academic Environment:** Different fields of study exhibit varying levels of procrastination-friendly environments. For instance, structured course progression and freedom in study situations can impact procrastination levels. Environments that offer more freedom and less structure tend to facilitate procrastination, especially among students with medium-level dispositional procrastination (Nordby, Klingsieck & Svartdal, 2017).
- **Task-Related Factors:** Tasks perceived as difficult, anxiety-provoking, stressful, frustrating, or boring are more likely to

Keywords

Academic procrastination; Goal management; SMART goals; Intentions

1. Introduction

Academic procrastination—the voluntarily delay of action on expecting to be worse off for that delay—is so pervasive that, estimates, 50–80% of college students procrastinate moderate al., 2000, Gallagher et al., 1992). Moreover, almost all student report the desire to reduce their procrastination (Gallagher et al., 2000). The prevalence of academic procrastination suggests a need for systematic documents the extent to which procrastination negatively correlates with the achievement of students' academic goals and that explores potential interventions to reduce procrastination.

A starting point for this study is some recent work that highlights procrastination as an important factor for individual differences in productivity. Theoretical accounts, for example, have suggested that various factors, such as goal management, such as goal setting (Steel & König, 2006) and goal commitment (Freund, 2014a), may influence procrastination. Some of these factors have also received support from a growing set of empirical studies (e.g., Pychyl, 2000, Blunt and Pychyl, 2005, Gröpel and Steel, 2008, Gershon et al., 2015, Kruglanski and Fishbach, 2016).

summarise the key findings

Get answer

The key findings of this study are that neither the SMART-goal nor implementation-intention intervention significantly reduced academic procrastination, but baseline academic procrastination was a unique predictor of the success in achieving self-generated academic goals, even after controlling for various other factors [1].

Key Findings

- SMART-goal and implementation-intention interventions did not reduce academic procrastination [1].
- Baseline academic procrastination uniquely predicted the success in achieving self-generated academic goals, even after controlling for other factors [1].

PDF Help

现有问题及解决办法

➤ 只涉及一个数据库

➤ 使用Web of Science/知网等综合搜索

➤ 推荐的文献太新，不适于引用经典概念/理论

➤ 追溯文献，顺藤摸瓜

➤ 推荐的文献数量有限

➤ 对期刊的品质没有把控

➤ 查看期刊影响因子、论文被引量等指标

主要功能

- 文献追溯：跟直接搜索相比，从可用的信息片段进入文献
- 信息提取：快速定位需要的信息

注意事项

- 严禁抄袭，避免学术不端
- 保持辩证，始终结合个人的判断
- 可以自行发掘更多使用方法
