针对年轻人中文写作能力弱，中科大光学工程博士点出招了

操秀英/微信公众号“科技日报”
2019-06-20 20:47

A+

中国科学技术大学光学工程博士点最近立了个新规。

“从今年入学的博士生开始，必须发一篇中文文章或论文才能毕业，哪怕在媒体或杂志上发一篇科普文章，甚至科技新闻报道都可以，但你不能没有。即使发再多很好的英文论文，也不行。”中国科学技术大学中科院量子信息重点实验室教授韩正甫告诉科技日报记者。

韩正甫说，他们做这个决定不是一时冲动，要为难学生，而是因为，“现在的大学生，尤其是理工科学生的中文写作能力实在太差，有些学生可能英文比较好，但中文文章累赘，错别字太多，有的连写个借条都面露难色。”

Is your English better than Chinese?

>> Facts about academic writing

美国圣昆丁监狱正在让囚犯们积极学习科技论文写作。该项目的负责人说，从前67%被释放的囚犯都会在3年内二进宫，“但是我们的Academic Writing项目出来的囚犯没有再返回监狱的例子。”

“太可怕了，我宁愿在外面饿死也不想再进去写论文了。”一个刚出狱的囚犯说。

今天要熬夜改另一篇合作文章，不是我学生的。。。同学们，学好英语写作，你的导师也许能多活几年。。。这绝不是在校耀，当年我导师改我

Info & Metrics

eLetters

An historic, unprecedented transition is unfolding in present-day China. We face pressing imperatives—the restructuring of the national economy, the rational use of our resources, the protection of our environment, the coordinated economic development of different regions, the alleviation of poverty, and the raising of living and ethical and cultural standards across our diverse country—all of which produce an urgent need for the development of science and technology. The outgoing century has witnessed a blossoming of science and technology in the world. Relativity, quantum mechanics, molecular biology, and information theory all arose in the 20th century, which is a testimony to the strength of the scientific method in the continual advancement of knowledge. These scientific breakthroughs form the foundation on which modern civilization builds, and they promise a future replete with material prosperity and intellectual enrichment worldwide. For these reasons, I believe that science and technology should be the driving force for China's rejuvenation and sustainable development.

Mobility report cards: the role of colleges in intergenerational mobility

ABSTRACT

We characterize intergenerational income mobility at each college in the United States using data for over 30 million college students from 1999-2013. We document four results. **First, access to colleges varies greatly by parent income.** For example, children whose parents are in the top 1% of the income distribution are 77 times more likely to attend an Ivy League college than those whose parents are in the bottom income quintile. **Second, children from low- and high-income families have similar earnings outcomes conditional on the college they attend,** indicating that low-income students are not mismatched at selective colleges. **Third, rates of upward mobility – the fraction of students who come from families in the bottom income quintile and reach the top quintile – differ substantially across colleges** because low-income access varies significantly across colleges with similar earnings outcomes. Rates of bottom-to-top quintile mobility are highest at certain mid-tier public universities, such as the City University of New York and California State colleges. Rates of upper-tail (bottom quintile to top 1%) mobility are highest at elite colleges, such as Ivy League universities. **Fourth, the fraction of students from low-income families did not change substantially between 2000-2011 at elite private colleges, but fell sharply at colleges with the highest rates of bottom-to-top-quintile mobility.** Although our descriptive analysis does not identify colleges' causal effects on students' outcomes, the publicly available statistics constructed here highlight colleges that deserve further study as potential engines of upward mobility.

“So you want to be a writer?” one of my professors asked me when he learned I was interested in a career as an academic scientist—a pointed warning **that a life of science is also a life of writing.**

I haven't mastered the writing game, and I am still constantly learning. But the top-down approach has been a game changer in my group. Now, when a new grad student indicates an interest in an academic career, I ask, “**So you want to be a Hollywood producer?**”

About this course

Research paper: the specific writing purpose that is most relevant to students' professional needs:

- language and discourse issues
- professional development needs
- using authentic materials and tasks
- assessment for/as learning

What do we do in this class?

- Reading-based approach
- Project-based writing
- IMRD format
 - ✓ Introduction
 - ✓ Methods
 - ✓ Results
 - ✓ Discussion

What do we do in this class?

- **Not** a research method class.
- **Not** an intensive reading class.
- **Not** a one-on-one tutorial class.
- **Not** a translation class for your other research papers.
- **Do not** offer feedback or comments to writing from your other English classes.
- 不提供教材电子版！（尊重版权）

Why projects?

**Tell me and I'll
forget. Show me
and I may
remember.
Involve me and I'll
understand.
~Chinese proverb**

“不闻不若闻之，闻之不若见之；见之不若知之，知之不若行之；学至于行而止矣。行之，明也。”（荀子）

>> Why group projects?

All academic work is done in teams because every project needs input and help from other people.

You may be in charge of some projects and, at the same time, you may be supporting projects headed by others.

You must learn to be a good leader and a good follower.

I assigned this project because it's important for scientists to learn how to collaborate.

>> Why group projects?

In this class, as in life, you don't get to choose your coworkers. So you have to find a way to work with them.

>> Why group projects?

THE EFFECT OF COMPUTER USAGE ON ACADEMIC PERFORMANCE: EVIDENCE FROM A RANDOMIZED CONTROL TRIAL AT THE UNITED STATES MILITARY ACADEMY*

By

Susan Payne Carter

Kyle A. Greenberg

Michael S. Walker

March 2016

Abstract:

We present results from a study that prohibited computer devices in randomly selected classrooms of an introductory economics course at the United States Military Academy. Our results indicate that using a computer device reduces final exam scores by roughly one-fourth of a standard deviation. Through the use of two separate treatment arms, we uncover evidence that the negative impact of computer devices occurs not only in classrooms where laptops and tablets are permitted without restriction, but also in classrooms where students are only permitted to use tablets that must remain flat on the desk surface at all times. Computer usage appears to be most harmful to male students and to students who began the course with high cumulative GPAs.

Finding the "sweet spot" of smartphone use: Reduction or abstinence to increase well-being and healthy lifestyle?! An experimental intervention study

[Julia Brailovskaia¹](#), [Jasmin Delveaux¹](#), [Julia John¹](#), [Vanessa Wicker¹](#), [Alina Noveski¹](#), [Seokyoung Kim¹](#), [Holger Schillack¹](#), [Jürgen Margraf¹](#)

Abstract

The present experimental study compared the impact of a total abstinence from smartphone use and of a reduction of daily smartphone use by 1 hr on well-being and healthy lifestyle. Participants ($N_{\text{total}} = 619$) were smartphone users in Germany. The first experimental group ($N = 200$) waived smartphone use for 7 days, the second experimental group ($N = 226$) reduced its daily use by 1 hr, and the control group ($N = 193$) used smartphone as usual. Variables of smartphone use (time, intensity, problematic tendencies), life satisfaction, depressive symptoms, anxiety symptoms, physical activity, and smoking behavior were assessed via online surveys at four measurement time points (baseline; postintervention; 1 and 4 months after postintervention). Both interventions reduced smartphone use intensity, problematic use tendencies, depressive, and anxiety symptoms. In both groups, life satisfaction and physical activity increased. Most effects were stronger and remained more stable over 4 months in the reduction group than in the abstinence group. Moreover, in the reduction group only, the number of daily smoked cigarettes decreased. Thus, less time spent on the smartphone leads to more well-being and a healthier lifestyle; a complete smartphone abstinence is not necessary. Programs that focus on the increase of well-being and a healthier lifestyle could benefit from the integration of controlled reduction of smartphone use. A potential "sweet spot" of smartphone use is discussed.

Caution

- This course is different from your high school English.
- You have to engage yourself in all the classroom activities.
- This course extends beyond just the classroom.
- This course is time consuming.
- You have to work in a group project.
