

1. Previous _____ (以过程为导向的) research has _____ (主要) investigated writing processes used by non-native speakers of English (L2) and found that more proficient writers _____ (给...分配更多的时间) planning and revising than less proficient writers who spend most of their time on _____ (表达, 阐述).
2. This knowledge _____ (起源于) the analysis of _____ (目标体裁) (e.g., Hyland, 2008) and from student surveys and interviews (e.g., Evans & Morrison, 2011).
3. The lack of attention to processes has been _____ (批判) by Dovey (2010) as _____ (有害的) to reading-to-write, that is students' ability to _____ (将资源中的论据融合到文章中).
4. Writers do not progress through the three components _____ (以线性的方式) but move between them _____ (循环往复地).
5. _____ (有声思维报告), the most widely used method, require writers to _____ (用言语表达) their thoughts while working on the writing task. The method has been criticised for being _____ (干扰性的) and _____ (破坏性的), because it _____ (施加限制) on cognitive processes (Smagorinsky, 2001).
6. As participants tend to fall silent during think-aloud sessions and have to be reminded to utter their thoughts (Ericsson & Simon, 1993), the presence of a researcher would be required, which is possible _____ (在受控条件下), but not in _____ (自然的) academic writing, as this _____ (涉及; 覆盖) over several, and often _____ (自发的), _____ (次数).
7. Retrospection, be it through _____ (刺激回忆), interviews or _____ (过程日志), _____ (带来...的风险) that writing activities and strategies are not fully recalled or reported by participants, thus being “_____ (易于) forgetting or _____ (捏造)” (McCulloch, 2013, p. 137).
8. The first author and a research assistant jointly coded the first session of each student to ensure _____ (一致性) in the identification of processes.
9. The comprehensive and _____ (细致地) organised outline meant that Gina had the structure and line of argument of her essay prepared before she began the _____ (写作) process, during which she _____ (严格按照) the outline.
10. The 11.5-minute _____ (选段) from Ellen's second session (Fig. 5) shows that her formulating was _____ (无规律地混入; 散布) by frequent _____ (查阅) of course documentation and information searches.
11. In Gina's case, formulating was always _____ (交织) the reviewing processes.
12. For the analysis of the writing processes and behaviours we _____ (利用) two data sources.
13. These examples, perhaps with further evidence from the screen recordings, would help to _____ (增强学生的意识) of the fact that academic writing requires a different _____ (投入) with the writing processes than their school writing might have done.

1. Previous **process-oriented** research has **predominantly** investigated writing processes used by non-native speakers of English (L2) and found that more proficient writers **allocate more time to** planning and revising than less proficient writers who spend most of their time on **formulating**.
2. This knowledge **stems from** the analysis of **target genres** (e.g., Hyland, 2008) and from student surveys and interviews (e.g., Evans & Morrison, 2011).
3. The lack of attention to processes has been criticised by Dovey (2010) as detrimental to reading-to-write, that is students' ability to integrate evidence from sources into their texts.
4. Writers do not progress through the three components **in a linear manner** but move between them **recursively**.
5. **Think-aloud protocols**, the most widely used method, require writers to **verbalise** their thoughts while working on the writing task. The method has been criticised for being **intrusive** and **disruptive**, because it **imposes constraints** on cognitive processes (Smagorinsky, 2001).
6. As participants tend to fall silent during think-aloud sessions and have to be reminded to utter their thoughts (Ericsson & Simon, 1993), the presence of a researcher would be required, which is possible **in controlled conditions**, but not in **naturalistic** academic writing, as this **stretches** over several, and often **spontaneous, sittings**.
7. Retrospection, be it through **stimulated recall**, interviews or **process logs**, **carries the risk** that writing activities and strategies are not fully recalled or reported by participants, thus being “**prone to** forgetting or **fabrication**” (McCulloch, 2013, p. 137).
8. The first author and a research assistant jointly coded the first session of each student to ensure consensus in the identification of processes.
9. The comprehensive and **meticulously** organised outline meant that Gina had the structure and line of argument of her essay prepared before she began the **composing** process, during which she **adhered closely to** the outline.
10. The 11.5-minute **extract** from Ellen's second session (Fig. 5) shows that her formulating was **interspersed** by frequent **consultations** of course documentation and information searches.
11. In Gina's case, formulating was always **interwoven with** the reviewing processes.
12. For the analysis of the writing processes and behaviours we **drew on** two data sources.
13. These examples, perhaps with further evidence from the screen recordings, would help to **raise students' awareness** of the fact that academic writing requires a different **engagement** with the writing processes than their school writing might have done.
