Learning objectives

- All about Literature Review
- in-text citation
- Collocation

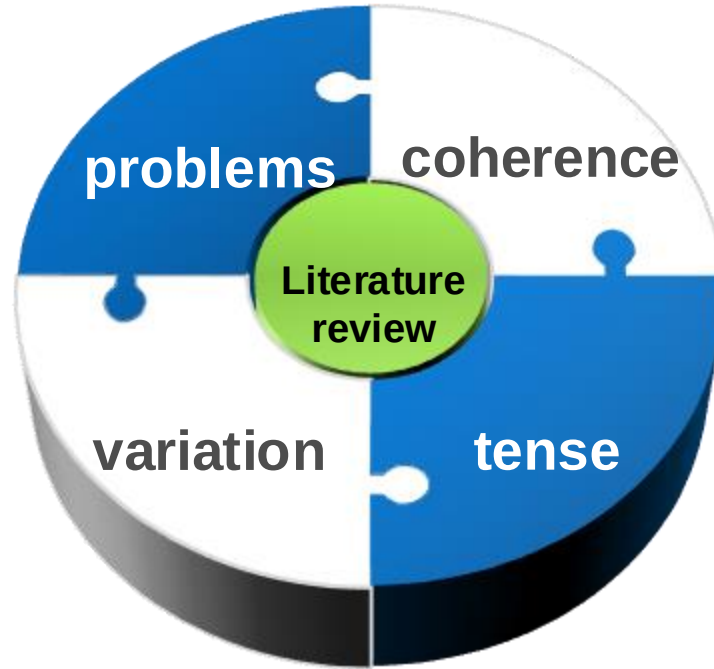

In a research paper, the review of literature can be a part of the Introduction section, or a stand-alone section with varied subtitles, such as

- “Literature Review”,
- “Previous Research”,
- “Review of Literature”,
- “Related Work”, or
- “Historical Background”.

Functions of literature review

- Gives credits to those who have laid the groundwork for your research.
- Demonstrates your knowledge and understanding of the research problem.
- Shows your ability to critically evaluate relevant literature information.
- Indicates your ability to integrate and synthesize the existing literature.
- Provides new theoretical insights or develops a new model as the conceptual framework for your research.
- Convinces your reader that your proposed research will make a significant and substantial contribution to the literature.

Literature review

What it is not

- X A list of the sources you have read
- X A simple summary of those sources or paraphrasing of the conclusions
- X Confined to description of the studies and their findings
- X Narrow and shallow in its approach
- X Confusing in the way you write about the papers
- X Constructed in an arbitrary fashion

What it is

- ✓ A critical evaluation of the literature you have read
- ✓ A synthesis of the available research in a defined area
- ✓ Broad and deep in its approach
- ✓ Clear and concise in the way you write about the papers
- ✓ Guided by a clearly defined, consistent concept

summary

synthesis

- Search for relevant literature

Plan

- Evaluate sources

- Write down the aims for the review.
- Summarize main points, esp. conclusions

Pre-writing: structuring your review

- Draft out an appropriate structure.
- Use sectioning to arrange material relevant to your points.
- Allocate appropriate evidence to sections

Building up a first draft

Writing a final draft

Starting to write

Outline your structure: Common structures

A literature review needs to **integrate, correlate, and evaluate** results from the published literature.

Chronological:

- Organize by time, analyze patterns, turning points, key debates

Thematic:

- Organize by topics or issues, address different aspects

Methodological:

- Organize by methodology, compare the results

Theoretical:

- Organize by theoretical approach, theories, models, and definitions

Outlining your review

Activity

You want to compose a literature review concerning the efficiency of group therapy in lowering depression amongst residents of a nursing home for the elderly.

- Pharmacological treatment of depression
- The elderly in nursing homes
- Measurement tools for depression
- Utilization of psychotherapy among the elderly
- Depression: causes, behavioral manifestations, and effects
- Societal attitudes towards aging
- Impacts of group therapy
- Side effects of drugs utilized to treat depression
- Psychological issues in the elderly

Outlining your review

Activity

You want to compose a literature review concerning the efficiency of group therapy in lowering depression amongst residents of a nursing home for the elderly.

- Pharmacological treatment of depression
- The elderly in nursing homes
- Measurement tools for depression
- Utilization of psychotherapy among the elderly
- Depression: causes, behavioral manifestations, and effects
- Societal attitudes towards aging
- Impacts of group therapy
- Side effects of drugs utilized to treat depression
- Psychological issues in the elderly

- ✓ Depression in general
 - Causation theories
 - Behavioral manifestation
 - Impacts
- ✓ Depression in the elderly, especially in nursing homes (problem and its scope)
- ✓ Impacts of treatment on depression
 - Pharmacological - disadvantages
 - Psychotherapy
 - Group therapy

GENERAL

SPECIFIC

Compose a literature review concerning the function of citations

Activity

This theory is widely proposed in manuals and standard practice guides.

1. Citations are used to recognise and acknowledge the intellectual property rights of the authors. They are a matter of ethics and a defense against plagiarism.

This theory has many supporters, especially in the well established fields like the sciences.

2. Citations are used to show respect to the previous scholars. They recognize the history of the fields by acknowledging the previous achievements.

The remaining theories have been proposed by individual authors.

3. Citations operate as a kind of mutual reward system. Rather than paying other authors money for their contributions, writers “pay” them in citations. (Ravetz ,1971)

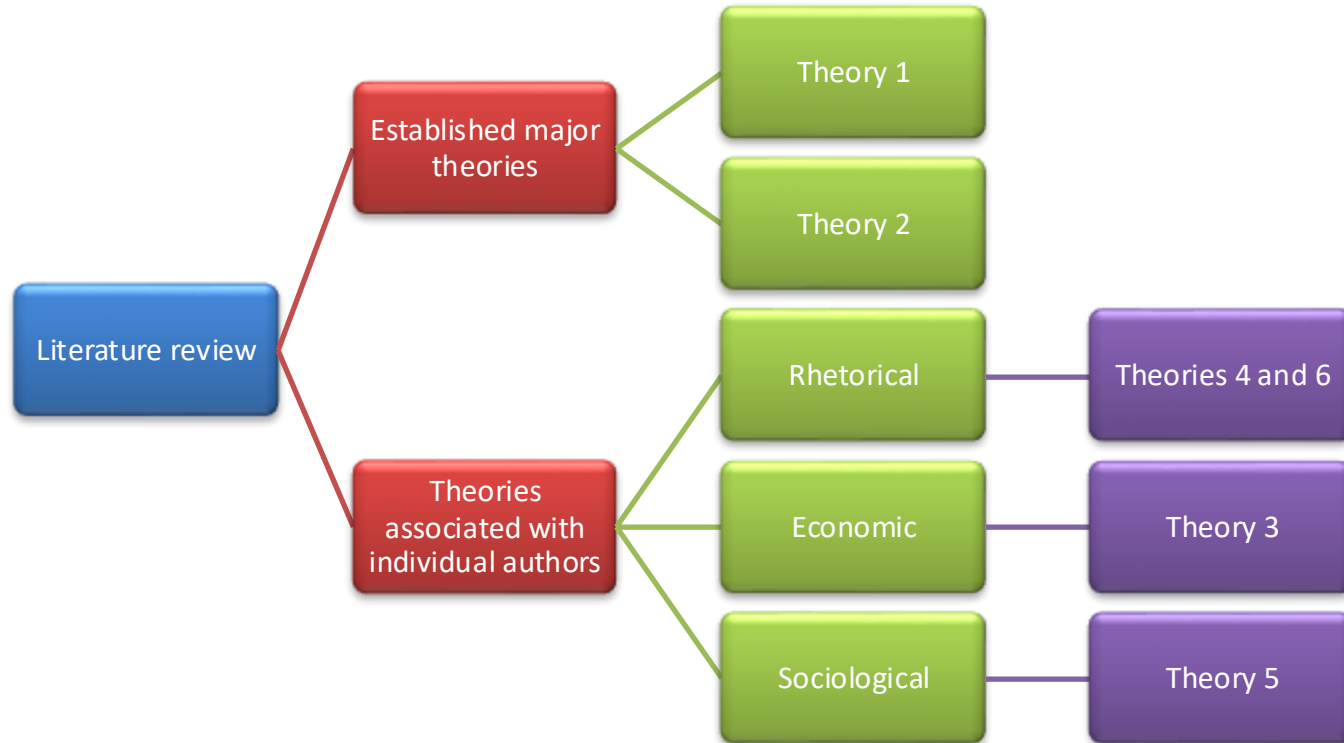

4. Citations are tools of persuasion; writers use citations to give their statement greater authority.(Gilbert ,1977)

5. Citations are used to supply evidence that the author qualifies as a member of a chosen scholarly community; citations are used to demonstrate familiarity with the field. (Bavelvs,1978)

6. Citations are used to create a research space for the citing author. By describing what has been done, citations point to the way to what has not been done and so prepare a space for new research. (Swales ,1990)

Compose a literature review concerning the function of citations

Activity

Rhetorical choices

Activity

The relationship that exists between motivation and the decision to attain literacy has been examined by Smith (1975), Jones (1983), and Brown (1988). Motivation entails various expectations (Snappe, 1986; Krkel, 1988). A large study done by Amund (1981) examined the beliefs people entering literacy programs, particularly outcome expectations and self-efficacy regardless of obstacles. Paape (1979), and in a follow-up project Johnson (1985), examined resistance to motivational efforts or the tendency to overlook information about an issue that's difficult to acknowledge. A literacy promotion program needs to overcome the inclination to minimize the problem.

Research suggests that various factors influence an adult's decision to obtain literacy. Individuals need to be motivated to make such a decision (Smith, 1975; Jones, 1983; Brown, 1988). Motivation involves at least two types of expectations (Snappe, 1986: Krakel, 1988). One must believe that literacy will positively affect one's life (outcome expectations) and also one can succeed in the effort to learn new skills regardless of obstacles (Amund, 1981). Other research reveals that when the problem is not easy to acknowledge, people tend to overlook information about, that is, to resist motivational efforts (Paape, 1979; Johnson, 1985). All these findings suggest that a literacy promotion program needs to overcome the tendency to minimize the problem.

Literature review

Two basic methods of acknowledging source materials

1. Direct quotation

In-text citation

According to Jones (1998), “Students often had difficulty using APA style, especially when it was their first time” (p. 199). Jones (1998) found “students often had difficulty using APA style” (p. 199); what implications does this have for teachers?

paraphrasing

The generally accepted theory for the evolutionary origins of play is that it allows children to learn actions and tasks that they will need to master as adults. In hunter-gatherer populations, games that help children develop accuracy, power, and hand-eye coordination are useful practice for hunting. (Goldfield, 2021)

The commonly believed hypothesis for the evolutionary beginnings of play is that it enables kids to learn activities and things that they will need to conquer later. In hunter-gatherer populations, pastimes that assist children develop exactness, strength, and hand-eye coordination are handy practice for hunting.

Experts believe that play has an evolutionary function. According to Goldfield (2021), play provided hunter-gatherer children with the opportunity to start learning skills that they would need in order to survive to adulthood.

- ALWAYS cite the source

- Failing to keep up with recent developments
- Failing to critically evaluate cited papers
- Citing irrelevant or trivial references
- Depending too much on secondary sources

Effects of Social Media Usage and Social Media Multitasking on the Academic Performance of University Students

Wilfred Lau

Social media have penetrated the lives of many young adults. The social media usage of American adults aged 18–29 years soared from 12% in 2005 to 90% in 2015 (Pew Research Center, 2015). In education, social media can be used to share information with students, collect information when overseas or while conducting research, share personal academic interests with other people, engage students and understand what they think about during instruction, form student study groups, and enhance e-textbook functions by connecting students with social tools for collaborative purposes (O'Brien, 2012). Social media also develop students' capacity to create and arouse their interests in academic subjects (Lau, Lui, & Chu, 2016), and students more easily communicate with working professionals through social media. Cox and McLeod (2014) found that social media foster communication among teachers, students, parents, and community members, and help create online professional learning communities.

Effects of Social Media Usage and Social Media Multitasking on the Academic Performance of University Students

In **university**, students and faculty members have increasingly adopted **various social media tools** such as Facebook and Twitter to promote teaching and learning both inside and outside the classroom. **Empirical studies have shown the following educational benefits** associated with the use of social media technologies: (a) enhanced communication between students and instructors, (b) increased opportunities for networking or collaborations among students, (c) rapid sharing of resources, (d) access to course materials by students after class, (e) provision of an alternative platform to the official learning management systems, and (f) exposure of students to technologies and skills that may improve their employment success (Legaree, 2015).

Because students are likely to use **more than one medium simultaneously**, the potential influence of **media multitasking behavior** has been under scrutiny for years. Regarding cognition, media multitasking **was found to be negatively related to** cognitive control ability in adolescents (Ophir, Nass, & Wagner, 2009). Thus, it is believed to **be predictive of poor academic performance**.

Today, a majority of social media tools **support the integration of multimedia elements**, and this functionality **makes media multitasking much easier** than was previously possible. Researchers and educators alike **are interested in the effects of social media** on student academic performance, and numerous empirical studies have explored whether such effects are positive, neutral, or negative (Cheston et al., 2013, Glogocheski, 2015). **Little, however, is known** about how social media usage and social media multitasking (SMM) influence the academic performance of university students. **Accordingly, this study examined whether and how** these two behaviors predict academic performance among university students.

Research
Question

Reading research papers

I. (Introduction)

- Increase in international students in U.S. higher education
- Potential challenges faced by international students due to language proficiency
- Research objective: investigate the impact of
 - ✓ English proficiency
 - ✓ multilingualismon academic performance of international students

II. Related Literature

- Factors influencing academic performance
 - ✓ Academic
 - ✓ Psychosocial
 - ✓ Cognitive
 - ✓ Demographic
- Unique challenges faced by international students
 - ✓ English proficiency
 - ✓ cultural and cross-cultural issues

II. Related Literature

- Existing research on the relationship between English proficiency and academic performance
 - ✓TOEFL scores and GPA
 - ✓TOEFL scores are not a good predictor
 - ✓IELTS scores and GPA , as inconsistent
- Limited research on the impact of multilingualism on academic performance

III. Research Method

- Ex-post facto, non-experimental design
- Self-reported questionnaire from 59 international students
- Variables:
 - ✓ **Independent Variables**
 - Self-perceived English language proficiency (self-rated language proficiency)
 - Number of languages spoken
 - ✓ **Dependent Variable**
 - Academic performance (GPA)

IV. Results

- Descriptive statistics: sample characteristics, language proficiency, academic performance
- Factorial analysis: significant differences in GPA based on English proficiency and number of languages spoken
- Multiple regression analysis: self-perceived English proficiency and number of languages spoken are significant predictors of GPA

V. Discussion

- Consistent with previous research on the relationship between self-perceived English proficiency and academic performance
- Interesting findings on the relationship between multilingualism and academic performance (highest GPA among students with English as third language)
- Limitations of the study and need for further research

VI. Implications for Practice

- Provide support services for international students (English courses, tutoring, supplemental courses)
- Incorporate pedagogical strategies to improve English academic skills
- Encourage social engagement and interactions with domestic students
- Promote ongoing communication among stakeholders

VII. Implications for the Current Study

- Summary of findings

VIII. Limitations and recommendations for Future Research

Work on the collocations.
