

1. _____ (差异始终存在) between the _____ (被充分证明的潜力) of technology-enabled learning and the _____ (较不稳定的现实情况) of technology use within university teaching and learning.
2. The belief remains among many commentators that incoming cohorts of university students _____ (更精通数字技术, 更能适应数字环境) than previously was the case.
3. Benefits include the _____ (多样性的增强) of provision and _____ (高等教育入学公平性), _____ (同时还有) the increased efficiency of delivery and _____ (学习过程个性化).
4. The _____ (必要性) for _____ (技术驱动的) forms of higher education is seen to be _____ (使...迫切) by the _____ (不断变化的背景和性格) of the people now entering universities as undergraduate students.
5. The survey was _____ (推广) to students through email, faculty communications, _____ (校内印刷品) and _____ (线上广告).
6. The _____ (自愿报名的) sample of those students who chose to respond _____ (包含) 1658 students.
7. However, _____ (占比略高) of _____ (一年级大学生) and those taking science subjects.
8. Analysis of these data _____ (采取...形式) of relatively straightforward _____ (主题分析). This involved _____ (初步阅读) of all responses to the _____ (开放式问卷题目) to _____ (获取整体感受) of the data. These data were then read again and ‘_____ (开放式编码)’ to produce an _____ (初步的编码清单) until, _____ (在...看来) the research team, analysis had reached _____ (理论性饱和).
9. Many of the reportedly ‘educational’ benefits of digital technology reported in this paper are more accurately described as _____ (与...有关) the ‘_____ (后勤; 组织工作)’ of university study rather than matters _____ (直接与...有关) ‘learning’ _____ (本身).
10. Much of how respondents _____ (描述他们的满意度) with digital technology therefore _____ (映射) findings from research into students’ general perceptions of what _____ (构成) a ‘good’ university environment.
11. _____ (因此), respondents most often _____ (描述) learning as _____ (外部强加的) and involving the _____ (例行获取和/或复制被传播的知识).
12. Thus, the ‘best’ uses of digital technology highlighted in these data could be said to _____ (提供生动写照) of the realities of _____ (当代的) student life.
13. As Daniels _____ (同意), ‘the cultures of institutions and the patterns of social interaction within them _____ (产生了形成性影响) on the “what” and “how” of learning’.

14. _____ (有理由得出结论) that universities _____ (有义务) to continue to support these useful 'logistical' and '_____ (以学习为中心的)' aspects of students' digital studies.
1. Differences have long persisted between the well-proven potential of technology-enabled learning and the less consistent realities of technology use within university teaching and learning.
 2. The belief remains among many commentators that incoming cohorts of university students are more digitally adept and digitally attuned than previously was the case.
 3. Benefits include the enhanced diversity of provision and equity of access to higher education, alongside the increased efficiency of delivery and personalization of learning processes.
 4. The imperative for technologically driven forms of higher education is seen to be exacerbated by the changing backgrounds and dispositions of the people now entering universities as undergraduate students.
 5. The survey was promoted to students through email, faculty communications, on-campus print and online advertising.
 6. The self-selecting sample of those students who chose to respond consisted of 1658 students.
 7. However, there was a slight over-representation of students in their first year of study and those taking science subjects.
 8. Analysis of these data took the form of relatively straightforward thematic analysis. This involved initial readings of all responses to the open-ended survey items to gain an overall sense of the data. These data were then read again and 'open-coded' to produce an initial code list until, in the opinion of the research team, analysis had reached theoretical saturation.
 9. Many of the reportedly 'educational' benefits of digital technology reported in this paper are more accurately described as concerned with the 'logistics' of university study rather than matters related directly to 'learning' per se.
 10. Much of how respondents framed their satisfaction with digital technology therefore mirrors findings from research into students' general perceptions of what makes for a 'good' university environment.
 11. As such, respondents most often framed learning as externally imposed and involving the routine acquisition and/or reproduction of transmitted knowledge.
 12. Thus, the 'best' uses of digital technology highlighted in these data could be said to offer a telling reflection of the realities of contemporary student life.
 13. As Daniels (2012, p. 2) contends, 'the cultures of institutions and the patterns of social interaction within them exert a formative effect on the "what" and "how" of learning'.
 14. It is reasonable to conclude that universities have an obligation to continue to support these useful 'logistical' and 'study-focused' aspects of students' digital studies.
