

1. To explore whether HCAI is sufficiently focused on people, we conducted a _____ (质性调查) of AI developers (N = 75) and users (N = 130) and performed a _____ (主题内容分析) on their responses to _____ (获取深刻见解) their differing priorities and experiences.
2. We found that the social impact of AI was a _____ (决定性特征) of positive user experiences, but this was _____ (非优先) for developers.
3. _____ (为了) _____ (使规范化) these developments, a number of guidelines have been proposed by governments, organizations, and researchers to _____ (将 HCAI 的理想设定转化为现实) (Jobin et al., 2019).
4. For example, Floridi et al. (2018) provide an _____ (伦理框架) called AI4People that _____ (包括) principles such as _____ (善行、公正、可解释性).
5. HCAI currently _____ (由...组成) _____ (一系列) guidelines, frameworks, and principles, but there is a lack of _____ (实证证据) _____ (关于) the extent to which these are utilized by AI developers, and whether HCAI _____ (在原则中及实践中) _____ (符合) the needs of users.
6. Responses to the survey were examined _____ (通过) a _____ (主题内容分析), using a _____ (编码方案) that was created _____ (归纳式地) based on patterns in responses, then iterated, and finally used to categorize all responses.
7. This _____ (样本量) is _____ (相称; 相符) similar studies in the HCAI literature (e.g., Maier et al., 2019; Moussawi, 2018).
8. _____ (有望), this _____ (与...一致) the emphasis of ethical AI guidelines (Jobin et al., 2019).
9. Developers also _____ (达成与...一致) existing guidelines in that they _____ (将...优先) the performance of AI systems but _____ (进一步) by focusing on other aspects of functionality such as usefulness and usability.
10. _____ (作为第一步), we argue that it is _____ (至关重要的) that AI enables people to strengthen their connections to groups and society _____ (在心理意义上).
11. The inclusion of developers 'in training' allowed us to _____ (大致了解) not only of priorities that are informed by current practice, but also of _____ (前沿思想) in HCAI.
12. This _____ (与...构成对比) existing user experience research in HCAI, which has tended to focus on specific AI systems.
13. Furthermore, to _____ (消除...之间的差别) the goals of HCAI and current practice, we propose that researchers and guidelines should focus more on understanding what people need in their lives and how AI helps or _____ (阻碍) the satisfaction of these needs.

1. To explore whether HCAI is sufficiently focused on people, we conducted a **qualitative survey** of AI developers (N = 75) and users (N = 130) and performed a **thematic content analysis** on their responses to **gain insight into** their differing priorities and experiences.
2. We found that the social impact of AI was a **defining feature** of positive user experiences, but this was **less of a priority** for developers.
3. **Seeking to formalize** these developments, a number of guidelines have been proposed by governments, organizations, and researchers to **translate the ideals of HCAI into practice** (Jobin et al., 2019).
4. For example, Floridi et al. (2018) provide an **ethical framework** called AI4People that **incorporates** principles such as **beneficence, justice, and explicability**.
5. HCAI currently **consists of a collection of** guidelines, frameworks, and principles, but there is a lack of **empirical evidence regarding** the extent to which these are utilized by AI developers, and whether HCAI **in principle and in practice aligns with** the needs of users.
6. Responses to the survey were examined **by means of a thematic content analysis**, using a **coding scheme** that was created **inductively** based on patterns in responses, then iterated, and finally used to categorize all responses.
7. This **sample size** is **commensurate with** similar studies in the HCAI literature (e.g., Maier et al., 2019; Moussawi, 2018).
8. **Promisingly**, this **accords with** the emphasis of ethical AI guidelines (Jobin et al., 2019).
9. Developers also **aligned with** existing guidelines in that they **prioritized** the performance of AI systems but **went further** by focusing on other aspects of functionality such as usefulness and usability.
10. **As a starting point**, we argue that it is **vital** that AI enables people to strengthen their connections to groups and society **in psychological meaningful ways**.
11. The inclusion of developers ‘in training’ allowed us to **gain a snapshot** not only of priorities that are informed by current practice, but also of **cutting-edge thinking** in HCAI.
12. This **contrasts with** existing user experience research in HCAI, which has tended to focus on specific AI systems
13. Furthermore, to **bridge the gap between** the goals of HCAI and current practice, we propose that researchers and guidelines should focus more on understanding what people need in their lives and how AI helps or **hinders** the satisfaction of these needs.
