

1. Many pet owners _____ (承认) spoiling their pets, even if it means _____ (削减) spending on themselves (Koetters, 2007; Short, 2008).
2. _____ (考虑到) mental health, pet owners report lower levels of loneliness, greater _____ (自尊心), and greater life-satisfaction than non-pet owners (Bao & Schreer, 2016; McConnell et al., 2011).
3. Research has demonstrated that _____ (满足需求) to belong is _____ (对…至关重要) well-being (e.g., Baumeister & Leary, 1995).
4. Thus, pet owners may be able to _____ (利用) their relationship with their pets to increase their well-being.
5. Most _____ (有关) the current research, they can also spend their money in ways to maximize their happiness.
6. Pets can _____ (被设想为) strong ties, as most people view their pets as family (McConnell et al., 2017).
7. Experiment 1 provides _____ (初步证据) that spending on pets promotes happiness.
8. There was _____ (无显著差异) in reported happiness between the personal and _____ (亲社会的) spending conditions, $p = .99$.
9. Experiment 2 _____ (复制) and _____ (拓展) the findings from Experiment 1 in a field setting using actual money.
10. The PANAS _____ (包含) _____ (广泛的) feelings and emotions; words that on closer inspection appear to be _____ (不同于) feelings of happiness (Watson et al., 1988).
11. The current research _____ (支持我们的假设) that spending money on pets promotes happiness.
12. The positive effects of pet spending on happiness _____ (显现) using two different _____ (范式) (recalled spending vs. actual spending), different _____ (测量方式) of happiness, and two distinct samples (younger lab sample vs. older community sample), suggesting a _____ (明显的; 强大的) effect.
13. It will be important to investigate the _____ (机制) _____ (潜在于) the pet spending effect.
14. Although past work suggests that spending amount does not _____ (使缓和) the effect of prosocial spending on happiness (e.g., Dunn et al., 2008), _____ (未来研究) should examine this and related questions as they _____ (用于) pets.
15. _____ (历时调查) of happiness indicate that people can more effectively increase and _____ (保持) their happiness by changing their activities rather than their life circumstances (Lyubomirsky et al., 2005; Sheldon & Lyubomirsky, 2019). _____ (有鉴于此), pet owners can spend on their pets as an additional _____ (实证的) strategy to improve their well-being.

1. Many pet owners **admit to** spoiling their pets, even if it means **cutting back on** spending on themselves (Koettters, 2007; Short, 2008).
2. **With respect to** mental health, pet owners report lower levels of loneliness, greater **self-esteem**, and greater life-satisfaction than non-pet owners (Bao & Schreer, 2016; McConnell et al., 2011).
3. Research has demonstrated that **satisfying the need** to belong is **paramount to** well-being (e.g., Baumeister & Leary, 1995)
4. Thus, pet owners may be able to **capitalize on** their relation- ship with their pets to increase their well-being.
5. Most **pertinent to** the current research, they can also spend their money in ways to maximize their happiness.
6. Pets can **be conceived of as** strong ties, as most people view their pets as family (McConnell et al., 2017).
7. Experiment 1 provides **initial evidence** that spending on pets promotes happiness.
8. There was **no significant difference** in reported happiness between the personal and **prosocial** spending conditions, $p = .99$.
9. Experiment 2 **replicates** and **extends** the findings from Experiment 1 in a field setting using actual money.
10. The PANAS **encompasses a broad range of** feelings and emotions; words that on closer inspection appear to be **distinct from** feelings of happiness (Watson et al., 1988).
11. The current research **provides support for our hypothesis** that spending money on pets promotes happiness.
12. The positive effects of pet spending on happiness **emerged** using two different **paradigms** (recalled spending vs. actual spending), different **measures** of happiness, and two distinct samples (younger lab sample vs. older community sample), suggesting a **robust** effect.
13. It will be important to investigate the **mechanism(s) underlying** the pet spending effect.
14. Although past work suggests that spending amount does not **moderate** the effect of prosocial spending on happiness (e.g., Dunn et al., 2008), **future work** should examine this and related questions as they **apply to** pets.
15. **Longitudinal investigations** of happiness indicate that people can more effectively increase and **sustain** their happiness by changing their activities rather than their life circumstances (Lyubomirsky et al., 2005; Sheldon & Lyubomirsky, 2019). **In line with this**, pet owners can spend on their pets as an additional **evidence-based** strategy to improve their well-being.
